

Here are some problems to keep you awake at night. As usual these are not necessarily representative of the problems on the final, but should give you a decent review of the new material. You are on your own for the old material.

1. Consider two vector fields  $\mathbf{F} = \langle -y, x \rangle$  and  $\mathbf{G} = \langle \cos x + y, x - 1 \rangle$  defined in the plane.
  - (a) Determine whether  $\mathbf{F}$  or  $\mathbf{G}$  is conservative. If conservative, produce a potential function.
  - (b) Let  $C$  be the oriented curve from  $(-3, 0)$  to  $(1, 0)$  given as follows: the straight line from  $(-3, 0)$  to  $(-1, 0)$ , then the clockwise arc of the unit circle to the point  $(1, 0)$ . Compute the line integrals  $\int_C \mathbf{F} \cdot d\mathbf{r}$  and  $\int_C \mathbf{G} \cdot d\mathbf{r}$ .
2. Let  $M$  be the surface of the potato chip which is that part of the surface  $z = xy$  inside the cylinder  $x^2 + y^2 = 1$ , and let  $C$  be its boundary positively oriented. If  $\mathbf{F} = \langle 3xz - y, xz + yz, x^2 + y^2 \rangle$ , find  $\oint_C \mathbf{F} \cdot d\mathbf{r}$ .
3. Let  $E$  denote the portion of the solid sphere of radius  $R$  in the first octant, and let  $\mathbf{F} = \langle 2x + y, y^2, \cos(xy) \rangle$ . Compute the flux of  $\mathbf{F}$  (surface integral) across the boundary of  $E$ , oriented by the outward-pointing normal vectors.
4. Let  $C$  denote the circle of radius  $R$  centered at the origin and oriented counterclockwise. Let  $\mathbf{F} = \langle \arctan x + y^3, 2x - \sqrt[3]{y} \rangle$ . Compute  $\oint_C \mathbf{F} \cdot d\mathbf{r}$ .
5. Compute the flux of the vector field  $\mathbf{F} = \langle x^3, 2xz^2, 3y^2z \rangle$  over the surface  $M$  where  $M$  is the boundary of the solid bounded by the paraboloid  $z = 4 - x^2 - y^2$  and the  $xy$ -plane.
6. Compute  $\int_C y dx + x dy + (x^2 + y^2) dz$  where  $C$  is the positively oriented curve which bounds that part of the unit sphere in the first octant. Note that this is a closed curve consisting of three parts.
