

Find the maximum flow (and prove it is maximal)

Minimum capacity for a cut is 2.

What if we allow to invert the flow in a pipe?

Minimum cut of capacity 4

4.3.3 A kitchen sink draws water from two tanks according to the network of pipes with capacity per unit time shown below. Find the maximum flow.

There exists a cut of capacity 34.
There also exists a flow of value 34,
which is thus maximal.
