Introduction	xi
1 Locally Compact Groups	1
1.1 Preliminaries on Topological Groups	2
1.2 Preliminaries on Locally Compact Groups	5
1.3 Haar Measure	16
1.4 An Interlude: Abelian Harmonic Analysis	22
1.5 Integration on Groups	28
2 Dynamical Systems and Crossed Products	41
2.1 Dynamical Systems	41
2.2 Covariant Representations	44
2.3 The Crossed Product	47
2.4 Representations of the Crossed Product	54
2.5 Comments on Examples	64
2.6 Universal Property	72
3 Special Cases and Basic Constructions	81
3.1 Another Interlude: The C^* -Algebra of an Abelian group	81
3.2 Third Interlude: The C^* -Algebra of a Compact group	84
3.3 Semidirect Products	86
3.4 Invariant Ideals	92
3.5 The Orbit Space	94
3.6 Proper Actions and Induced Algebras	99
4 Imprimitivity Theorems	109
4.1 The Symmetric Imprimitivity Theorem	110
4.2 Some Special Cases	125
4.3 Green's Imprimitivity Theorem	130
4.4 The Stone-von Neumann Theorem	133
4.5 Transitive Transformation Groups	137

5	Induced Representations and Induced Ideals	151
5.1	Induced Representations of Crossed Products	151
5.2	An Example	161
5.3	Inducing Ideals	164
5.4	Invariant Ideals and the Induction Process	166
6	Orbits and Quasi-orbits	171
6.1	The Mackey-Glimm Dichotomy	171
6.2	The Res Map and Quasi-Orbits	179
7	Properties of Crossed Products	189
7.1	The Takai Duality Theorem	189
7.2	The Reduced Crossed Product	197
7.3	Crossed Products Involving the Compacts	203
7.4	Aside on Twisted Crossed Products	208
7.5	The Type Structure of Regular Crossed Products	221
8	Ideal Structure	227
8.1	Fibering Over the Orbit Space	227
8.2	EH-Regularity and the GRS-Theorem	239
8.3	The Ideal Structure of $C_0(X) \rtimes_{\text{lt}} G$	242
8.4	The Fell Subgroup Crossed Product	256
9	The Proof of the GRS-Theorem	261
9.1	Step I: Induced Primitive Ideals	268
9.2	Step II: Restricting to the Stability Groups	271
9.3	Step III: Sauvageot's Induced Representation	283
9.4	Step IV: G Amenable	292
9.5	Step V: Gootman-Rosenberg <i>a la</i> Renault	298
Appendices		
A	Amenable Groups	311
A.1	States and Positive Definite Functions	311
A.2	Amenability	318
A.3	Another GNS Construction	327
B	The Banach *-Algebra $L^1(G, A)$	331
B.1	Vector-Valued Integration	331
B.2	Product Measures	344
C	Bundles of C^*-algebras	353
C.1	$C_0(X)$ -algebras	354
C.2	Upper Semicontinuous C^* -bundles	360

D	Groups	369
D.1	Group homomorphisms	369
D.2	Borel Groups and Invariant Measures	374
D.3	Projective Representations	379
D.4	Quasi-invariant Measures	387
D.5	Technical Results	391
E	Representations of C^*-algebras	399
E.1	Multiplicity	399
E.2	Decomposable Operators	405
F	Direct Integrals	409
F.1	Borel Hilbert Bundles	409
F.2	The Direct Integral of Hilbert Spaces	413
F.3	Decomposable Operators	416
F.4	τ -isomorphisms	421
F.5	Uniqueness of Direct Integrals	422
F.6	Isomorphism Bundle	427
F.7	Product Borel Structure	427
F.8	Measurable Sections	429
G	Effros's Ideal Center Decomposition	431
G.1	Effros's Ideal Center Decomposition	431
G.2	Ideal Center Decompositions of Covariant Representations	445
H	The Fell Topology	453
H.1	The Fell Topology	453
H.2	Basic Results	456
H.3	Bruhat Approximate Cross Sections	465
H.4	The Stabilizer Map	469
H.5	Borel Issues	473
H.6	Prim A Standard	474
I	Miscellany	479
I.1	The Internal Tensor Product	479
I.2	Disintegration of Measures	481
I.3	Abelian Von Neumann Algebras	488
I.4	The Hilbert Space $L^2(G, H)$	490
I.5	The Dual of $L^1(G)$	495
I.6	Point Maps	498
I.7	Representations of $C_0(X)$	503
I.8	Invariants of Morita Equivalent C^* -Algebras	507
	Notation and Symbol Index	509
	Index	513
	Bibliography	521
