# The Gradient and Directional Derivatives

January 11, 2006

## The gradient

Let  $f: X \subseteq \mathbb{R}^n \to \mathbb{R}$  be a scalar valued function. Then the gradient

$$\nabla f = \left(\frac{\partial f}{\partial x_1}, \frac{\partial f}{\partial x_2}, \dots, \frac{\partial f}{\partial x_n}\right).$$

1

## **Directional Derivative**

Consider a scalar-valued function f, a point a in the domain of f and v any unit vector then the directional derivative of f in the direction of v, denoted  $D_v f(a)$ , is

$$D_{\mathbf{v}}f(\mathbf{a}) = \lim_{h \to 0} \frac{f(\mathbf{a} + h\mathbf{v}) - f(\mathbf{a})}{h}$$

provided the limit exists.

## Computing the directional derivative using the gradient

Let f be a differentiable function and  $\mathbf{a}$  be a point in the domain of f then

$$D_{\mathbf{v}}f(\mathbf{a}) = \nabla f(\mathbf{a}) \cdot \mathbf{v},$$

where  $\ensuremath{\mathbf{v}}$  is a unit vector.

## Maximum and minimum values of $D_{\mathbf{v}}f(\mathbf{a})$

- $D_{\mathbf{v}}f(\mathbf{a})$  is maximized when  $\mathbf{v}$  points in the same direction of the gradient,  $\nabla f(\mathbf{a})$ .
- $D_{\mathbf{v}}f(\mathbf{a})$  is minimized when  $\mathbf{v}$  points in the **opposite direction** of the gradient,  $-\nabla f(\mathbf{a})$ .
- Furthermore, the maximum and minimum values of  $D_{\mathbf{v}}f(\mathbf{a})$  are  $\|\nabla f(\mathbf{a})\|$  and  $-\|\nabla f(\mathbf{a})\|$ , respectively.

Tangent planes to level surfaces:  $f(\mathbf{x}) = c$ 

Let c be any constant.

If  $\mathbf{x}_0$  is a point on the level surface  $f(\mathbf{x}) = c$ , then the vector  $\nabla f(\mathbf{x}_0)$  is perpendicular to the surface at  $\mathbf{x}_0$ .

## **Computing Tangent plane for level surfaces**

Given the equation of a level surface f(x, y, z) = c and a point  $x_0$ , then the equation of the tangent plane is

$$\nabla f(\mathbf{x}_0) \cdot (\mathbf{x} - \mathbf{x}_0) = 0$$

or if  $\mathbf{x}_0 = (x_0, y_0, z_0)$  then

 $f_x(\mathbf{x}_0)(x-x_0)+f_y(\mathbf{x}_0)(y-y_0)+f_z(\mathbf{x}_0)(z-z_0)=0.$
