

**Class visitation**  
Bjoern Muetzel  
Math 31, Fall 2017

On September 27 2017 I visited Bjoern Muetzel's Algebra Class (Math 31) the topic of discussion was Cayley graphs: a nice choice for synthesizing ideas covered in the previous weeks. Bjoern's enthusiasm for and interest in Cayley graphs were abundantly clear and helped to draw his students in. Bjoern's students were comfortable posing questions and Bjoern did a great job animating his answers with relevant and accessible examples. Bjoern also punctuated the lecture portions of the class with group/individual problems which gave him a chance to actively assess the understanding of his students. Overall, Bjoern gave a well-structured class that was fun to visit and provided his students—many of whom are at the beginning of their journey into mathematics—a way of “seeing” groups. —
